

King County DNRP Water Quality Index

STATION **D474** WATER YEAR **2018**

GAUGE # 45Nc North Creek at County Line, Snohomish County gage Overall Index **56**

King County has monitored water quality in North Creek at two locations. In 1999 sampling began at Station D474 located at the bridge on NE 205th near 120th NE. Monitoring was discontinued between 2008 and 2014 when budget cutbacks forced King County to reduce its water quality monitoring program. The North Creek basin encompasses 19,000 acres and includes Silver Lake, Ruggs Lake, and Thomas Lake. The creek originates within the Everett Mall area and flows 12.6 miles through the City of Mill Creek before draining into the Sammamish River near Bothell. The rapidly urbanizing North Creek basin was already approximately 49 percent impervious surface area in 2002. The headwaters of North Creek were originally dominated by forested wetlands but are currently dominated by commercial and multi-family residential development. The creek is on the 2012 Washington Department of Ecology's 303(d) list for violation of water temperature and dissolved oxygen standards and is a high concern in the 2013 WQI Report.

Annual Water Quality Index Scores

Water quality was MODERATE based on data collected 10/1/2017 to 9/30/2018.

Monthly Scores For Water Year 2018

92	82	80	84	88	89	68	59	85	49	82	59

WQI Score Comparison By Water Year

About The Water Quality Index:

The Water Quality Index (WQI) score is a unit-less number ranging from 10 to 100: the higher the number, the higher the water quality. Scores are calculated from data collected during the monthly routine sampling. For temperature, pH, fecal coliform bacteria, turbidity, and dissolved oxygen, the index expresses results relative to levels required to maintain beneficial uses according to criteria in Washington's Water Quality Standards, WAC 173-201A. For nutrient and sediment measures where there are no standard, results are expressed relative to guidelines for this eco-region. Results from the eight parameters are aggregated over time to produce a single score for each sample station. In general, stations scoring 80 and above did not fail water quality standards or guidelines and are of "low concern", scores 40 to 80 indicate "moderate concern", and water quality at stations with scores below 40 are of "high concern". For more information about the WQI please visit <https://green2.kingcounty.gov/streamsdata/WQI.aspx>
